DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed August 14, 2002 in which Claim 1 has been amended, has been place of record in the file as Paper No. 10.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Eldridge et al. (U.S. Patent No. 6,336,269). Applicant's admitted prior art discloses transducers having transductional devices that can be opto-electronic devices or electronic devices, jumper cables, substrates, integrated circuits. See Page 1, Lines 7-26.

However, Applicant's admitted prior art doesn't show the transducer having a base mounted on the substrate, and an I/O lead configure to directly contact an I/O lead of the integrated circuit mounted on the substrate.

Page 3

Application/Control Number: 09/574,647

Art Unit: 2833

Eldridge et al. discloses the concept of having an electronic component (1940) mounted in a substrate (1900) and having an I/O lead (1920) configure to directly (Column 92, Lines 4-17) contact an I/O lead (1922b) of another electronic component (1950) mounted on the substrate (1900). See Fig. 19B, Column 91, Lines 21-67 and Column 92, Lines 1-26.

Therefore, it would have been obvious to one with ordinary skill in the art to modify the transducer of the Applicant's admitted prior art by arranging the transducer and the integrated circuit board to have the I/O lead of the transducer configured to directly contact an I/O lead of the integrated circuit mounted on the substrate as shown in Eldridge et al. in order to avoid relying on the electrical conductivity of any material on the substrate making the connection more effective.

Response to Arguments

4. Applicant's arguments with respect to claims 1-10 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edwin A. León whose telephone number is (703) 308-6253. The examiner can normally be reached on Monday - Friday 9:00-5:30.

Art Unit: 2833

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on (703) 308-2319. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
